Section 1 : Coding

1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

Input Format

The input consists of an integer N, representing the number to be checked.

Output Format

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

Answer

```
// You are using Java
import java.util.*;
class NewClass{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int num = sc.nextInt();
        int digitCount = 0;
        int sum = 0;
        int temp = num;

        do{
            int n = temp%10;
            temp = temp/10;
            digitCount++;
            sum += n;
        }
        while(temp>0);
        if(sum == digitCount){
            System.out.printf("The number of digits in %d matches the sum of its
digits.",num);
        }
        else{
            System.out.printf("The number of digits in %d does not match the sum of
its digits.",num);
        }
    }
}
```

Status : Correct
