## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 3\_Q4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

##### *Input Format*

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

#### ***Output Format***

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

#### ***Sample Test Case***

Input: 3 3

1 2 3

4 5 6

7 8 9

1 1 1

2 2 2

3 3 3

Output: 2 3 4

6 7 8

10 11 12

#### ***Answer***

```
// You are using Java
import java.util.*;
class newClass{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int n = sc.nextInt();
        int m = sc.nextInt();
        int[][] arr_1 = new int[n][m];
        for(int i=0;i<n;i++){
            for(int j=0;j<m;j++){
                arr_1[i][j] = sc.nextInt();
            }
        }
        int[][] arr_2 = new int[n][m];
        int[][] arr_sum = new int[n][m];
        for(int i =0;i<n;i++){
            for(int j =0;j<m;j++){
```

```
        arr_2[i][j] = sc.nextInt();
        arr_sum[i][j] =arr_1[i][j] + arr_2[i][j] ;
        System.out.print(arr_sum[i][j]+ " ");
    }
    System.out.print("\n");
}
}
```

**Status :** Correct

**Marks :** 10/10
